Report Notes

1. Welcome to the CAA's *Aviation Trends* report. Every quarter we update key metrics which summarise "commercial" aviation activity at the United Kingdom's airports. Please note that the figures may be subject to minor changes in future due to on-going adjustment, revision and updates - historic reports will not be reissued.
2. The data in this report is compiled by the CAA with the co-operation of UK airport and airline operators. Their assistance is gratefully acknowledged. More detailed data and information regarding the source(s) are available on the CAA's website: <https://www.caa.co.uk/data-and-analysis/uk-aviation-market/>
3. Since the information contained in this report has been acquired from multiple sources, it is not possible for the CAA to check and verify whether it is accurate and correct nor do we undertake to do so. Consequently the CAA cannot accept any liability caused by any person's reliance on it.
4. For the purposes of this report the Channel Islands - Jersey, Guernsey, Alderney - and the Isle of Man are considered domestic aviation and their data is included, despite not formally being part of the United Kingdom.
5. **Terminal Passengers**
 - a. Terminal passenger are travellers who board or disembark a commercial flight at a UK reporting airport. Note: domestic passengers are effectively counted twice (on boarding at one UK airport and disembarking at another) and therefore the figures displayed will not reflect the number of "onboard" passengers in the UK aviation market.
 - b. Load Factor is calculated by dividing the number of passengers on a flight by the total number of seats expressed as a percentage - i.e. reflecting the seat occupancy on flights.
6. **Air Transport Movements (ATMs)**
 - c. Similar to Terminal Passengers (above), an ATM between two UK airports - i.e. a domestic flight - will be counted twice, once on departure and on arrival at the destination airport.
 - d. Data excludes Air Taxi flights: this is charter air transport movements performed by aircraft with a Maximum Take Off Weight (MTOW) of below 15 tonnes.
7. **Cargo Tonnage** data represents freight and mail which is transported into and out of the UK on air freighters and in the belly hold of passenger aircraft. Any cargo transiting the UK is not included in the figures.
8. **Punctuality**
 - e. The CAA collects punctuality information from 25 UK airports - these are typically the largest airports in terms of movements/passengers. For the full list please visit the link below
 - f. In the punctuality data, 'delay' is recorded as the difference between an aircraft's scheduled arrival or departure time and the actual time it reaches or departs the airport gate (pre 2018 'delay' was measured as the difference between the scheduled time and a calculated time that the aircraft reached/depended the gate by taking the time the aircraft arrived at the runway and a fixed taxi time to/from the gate (see the link below for more information).
 - g. In 2018 the CAA began formally collecting flight cancellation information from airport suppliers. Before this data was supplied to the CAA on a voluntary basis. For more information on what formally constitutes a cancellation in the CAA data, please visit the link below.
 - h. A flight is deemed to be "on-time" if it arrives or departs from the airport gate within 15 minutes of its scheduled time. The figures displayed in this report are an aggregation of UK arrival and departure punctuality.
 - i. Since the CAA only collects information from UK airports, this report contains no information about overseas punctuality. This is pertinent particularly for flights departing the UK where time may be gained (or lost) en-route and therefore the total delay experienced by passengers may vary to that published.
 - j. Average delay minutes are calculated from the total minutes of delay recorded by all flights (with early flights counted as zero minutes delay) divided by the total number of flights operated.
 - k. More details regarding CAA punctuality statistics can be found here: <https://www.caa.co.uk/data-and-analysis/uk-aviation-market/flight-punctuality/uk-flight-punctuality-statistics/>
9. As some of the trends in this report are long term (30+ years), not all airports consistently reported to the CAA over this period - particularly regarding punctuality dataset. Therefore these figures should be used as a guide of national performance and not necessarily the precise results.

Key performance indicators - Q3 2024 (vs 2023)

The figures on the left show the number of passengers, air transport movements (ATMs) and cargo volumes for the quarter. The load factor (the percentage of seats occupied on flights) and punctuality metrics are also displayed.

The text in green or red show growth rates relative to the same period last year.

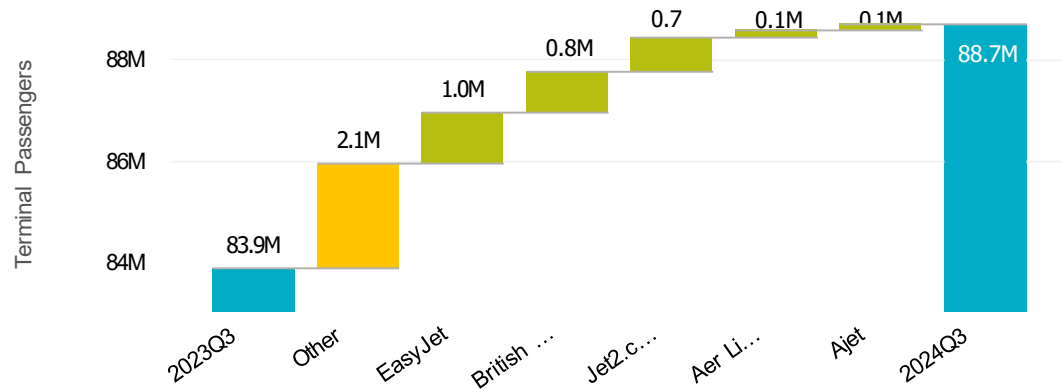

* A flight is considered "on time" if it arrives or departs the gate within 15 minutes of the scheduled time.

Terminal passengers Q3 2024

Year-on-year comparison

Terminal passengers by airline

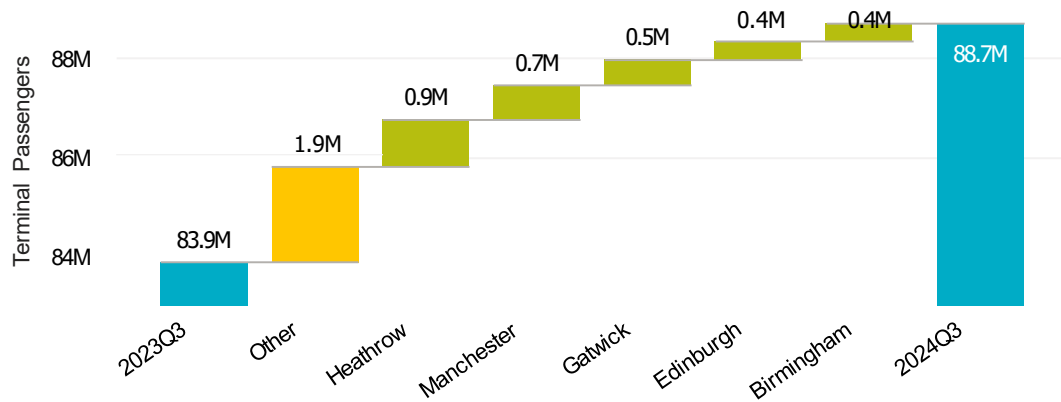

Terminal passengers by scheduled & charter services

The number of terminal passengers in Q3 was 88.7M up from 83.9M in the same period last year.

Terminal passengers by reporting airport

Terminal passengers by market

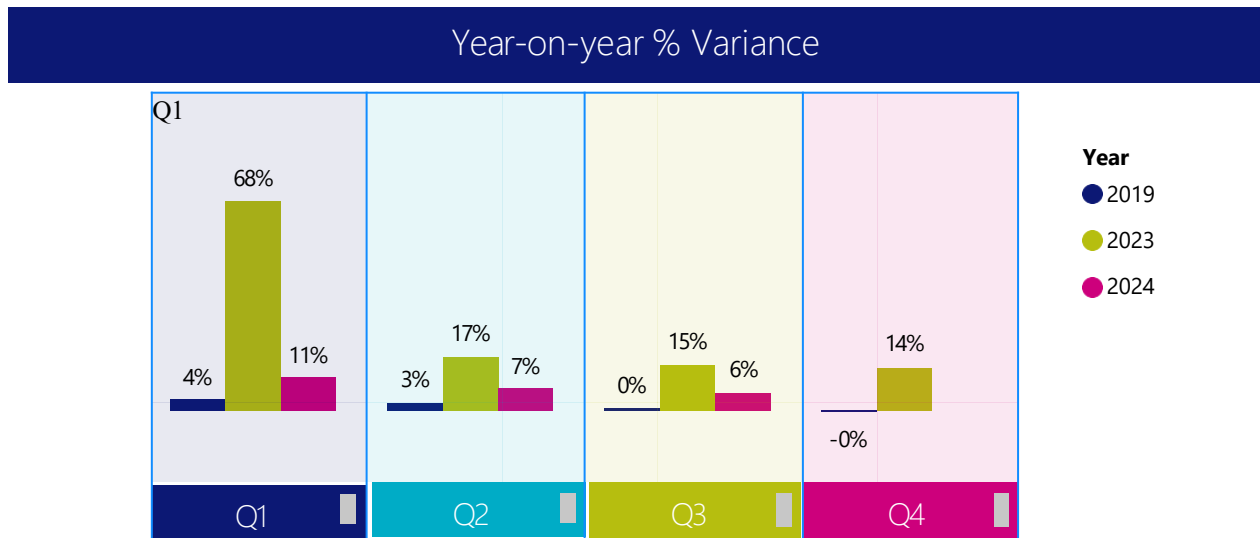

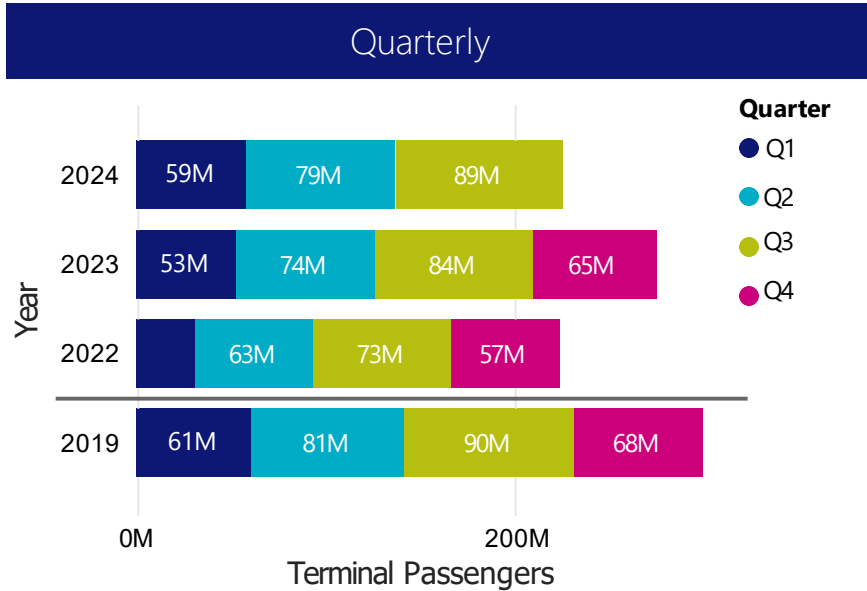

The charts on this page show the distribution of passenger growth across UK airports, airlines, operation type and market. The top 5 contributors are displayed for airports and airlines with the remainder grouped as "Other".

Terminal passengers

5 Year Trend

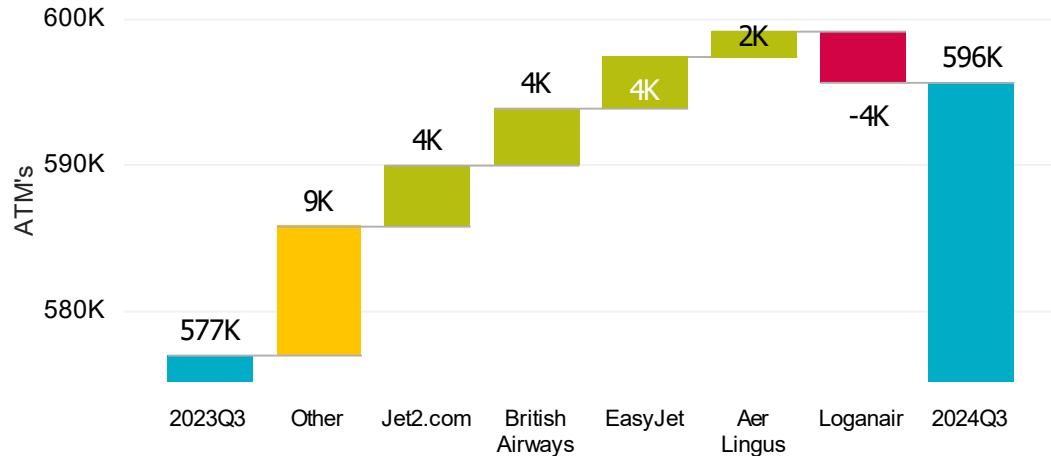

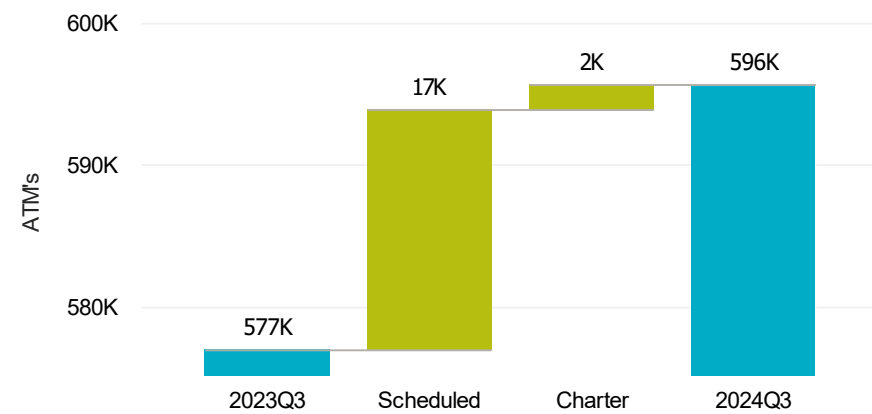

Air Transport Movements (ATM's) - Q3 2024

Year-on-year comparison

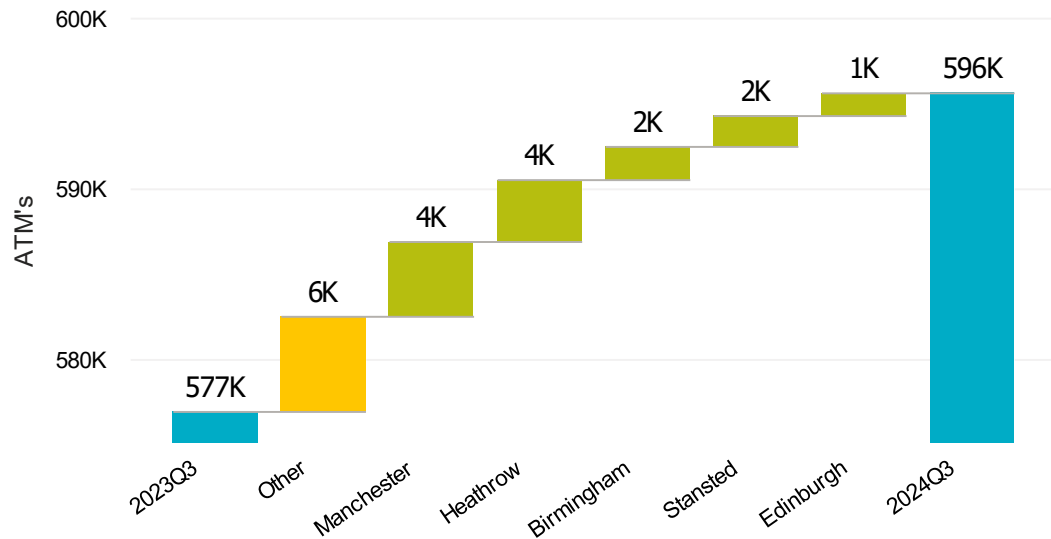

ATM's by airline

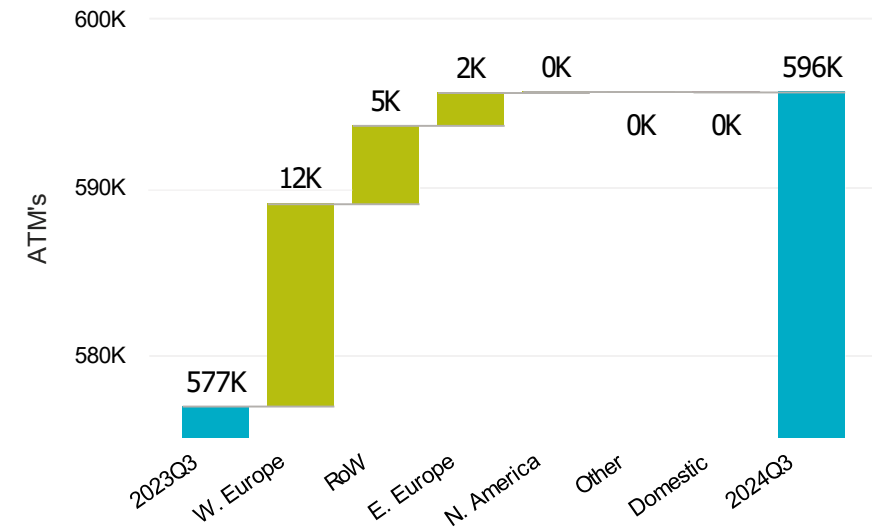

ATM's by scheduled & charter operation

ATM's by reporting airport

ATM's by market

The number of ATM's in Q3 was 596K up from 577K in the same period last year.

The charts on this page show how ATM growth is distributed across UK airports, airlines, operation type and market. The top 5 contributors are displayed for airports and airlines with the remainder grouped as "Other".

Air Transport Movements (ATM's)

5 Year Trend
