

# Stansted Density Plots for LAMP PIR

## Updated density tool - Colour assignments – Flights Per Day

Each flight in this sample is set to be a 1500m wide track (750m either side of the radar trajectory)

Settings for number of *divisions* between densities, and what quantities define the min/max colour bands

Where a number of tracks overlap *the same place within the 7 day sample period*, it shows the appropriate colour. The density colours are set to 50% transparent so the underlying OS map can be seen.

E.g. for a yellow colour to be seen, 140-349 flights overflow within 750m of a location over *the 7 day period*

Dividing 140-349 flights by 7 days is "20 to (less than 50)", hence 20-49.9
