

# STATEMENT: NOT ELIGIBLE FOR ADOPTION - TCCA AD CF-2023-46

## Background

On 30 June 2023, Transport Canada issued AD CF-2023-46 which supersedes AD CF-2021-52, issued 24 December 2021. AD CF-2023-46 is applicable to “*all transport and commuter category airplanes equipped with a radio (also known as radar) altimeter*”. This AD recognises FAA AD 2023-10-02, and “*requires the similar actions as FAA AD 2023-10-02 for Canadian registered aeroplanes, that are not of U.S. state of design, when operating in contiguous U.S.*”

## Reason

The Applicability of Transport Canada AD CF-2023-46 provides a list of affected aeroplane types (not exhaustive – “but not limited to”) which includes types for which the TCCA does not represent the State of Design. Consequently, AD CF-2023-46 is considered as a State of Registry AD.

## Decision

Considering the reasons described above, the position of the CAA is that Transport Canada AD CF-2023-46 is not eligible for adoption for UK registered aircraft.

## Comments

Enquiries regarding this decision should be referred to:
